COMMERCIAL EV VAN BODY

E-VAN

OVERVIEW

FULLY COMPOSITE, LIGHTWEIGHT SOLUTION FOR COMMERCIAL EV VEHICLES

EV CHASSIS

Specifically designed for the EV Commercial Market. Built to perform for the longer use life of the EV Commercial vehicle. Lighter weight enhances the EV chassis range.

COMPOSITE CAB

The E-Van blends seamlessly with the Sevna Cab for an efficient and streamlined appearance.

COMPOSITE BODY

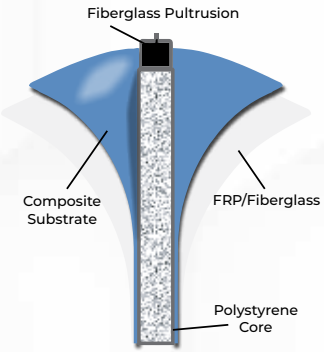
Built by Fortress Composites, the leading Composite EV Body builder in the US.

CONFIGURATIONS

- Step Van
- Delivery Van
- Work Van
- Recreation Vehicle

The modern body for the modern chassis. Designed specifically for the EV market, the E-Van is built to maximize the chassis potential in both range and longevity.

When partnered with the SEVNA Cab, the E-Van is twice as aerodynamic as traditional step vans and commercial cab-overs.



E-VAN MULTI-LAYERED PANEL CONSTRUCTION

Custom anchor points are installed into the walls and floor for any use, such as shelving, E-track, tie-downs, etc. Windows are available along with several door options at the rear (composite rolling door, hung door or solid rear wall). Construction includes insulated R10 thermal protection on sidewalls, roof and floor. Repair, when needed, is easy. A simple fiberglass patch, resin and paint is all that's required. No more need to replace complete panels!
